

Objective

This mini-project provides you with the opportunity to compile and install a new Ubuntu kernel on your system.

Instructions

1. Students should form a group of up to 6 – 8 members.
2. Study the process of compiling and installing a new Ubuntu kernel by visiting the following resources:
<https://ubuntu.com/kernel/docs/how-to/develop-customise/build-kernel/>
3. Compile and install the kernel to your machine.

Hint: It is recommended to deploy the new kernel in a Linux virtual machine using virtualization software such as VMware or VirtualBox. This allows you to easily roll back to the previous kernel if your system becomes unstable.

Submission

submit a report detailing the step-by-step process of how to compile and install the kernel.
